Outdoor therapy is the wellness travel trend you need to try

Today, around 4.4 billion people live in cities. That’s more than half the world’s population. While urban environments bring with them myriad benefits, from economic advantages to entertainment, they also often come with a lack of connection to nature. Travel destinations, hotels and wellness centers around the world are catching on, offering a variety of outdoor therapies that promise to help visitors with their physical and mental wellbeing.

How can we limit global warming?

Limiting the rising in global warming is theoretically achievable, but politically, socially, and economically difficult. Those same sources of greenhouse gas emissions must be limited to reduce warming. For example, oil and gas used to generate electricity or power industrial manufacturing will need to be replaced by net zero emission technology like wind and solar power. Transportation, another major source of emissions, will need to integrate more electric vehicles, public transportation, and innovative urban design, such as safe bike lanes and walkable cities.

New words spreading faster than ever

When people think of word innovators throughout history, male writers probable come to mind. Shakespeare is credited with inventing more than 1.700 words.

But despite contributions from famous writers, historians say another group has an even greater impact on the development of language: teenage girls.

With the rise of social media, language changes are also happening faster than ever.

“Language has its own path, its own system, and it changes whether we like it or not,” ... “We are all often part of those changes without even knowing it.”

What are the benefits of sound in meditation?

We react to music in physiological and emotional terms.

Sound therapy has been linked to the release of neurotransmitters such as dopamine and serotonin, which are associated with feelings of pleasure and well-being. This neurochemical response may contribute to the profound sense of relaxation and positivity reported by individuals after engaging in sound-based practices.

Time aboard the international Space Station

Looking down at the planet from 200 miles in space, I feel as though I know the Earth in an intimate way most people don't. The line of our atmosphere on the horizon looks as thin as a contact lens over an eye, and its fragility seems to demand our protection.

Sometimes when I'm looking out the window, I think that everything that matters to me, every person who has ever lived and died (minus our crew of six) is down there. Other

times, of course, I'm aware that the people on the station with me are the whole of humanity for me now.

About urban art scene in Italy

Italy saw some pioneering examples of public urban art between the end of the 19th and start of the 20th century. They were tied with the Liberty and art nouveau art movements, which represented the will to bring creativity and beauty not only to the buildings of the rich and powerful but also to those with a more collective use, such as schools, factories and hospitals. Then, in the 1960s and 1970s, in the wake of social engagement and avant-garde art movements such as arte povera, visual poetry, urban art became a form of protest in various medium-size urban centres.

Being a wildlife photographer

My love for wildlife comes from my parents, who raised me to love and respect the natural world.

Being a shy teenager, I felt like nature was a place I belonged. Now, I've been taking pictures for 39 years. Documenting nature came naturally to me, we're all part of it. You don't need to ask permission to be there: you only need to behave like a guest and you'll be accepted. Some of my favorite wildlife projects feature everyday subjects that may be taken for granted.

Having a human reaction to an eclipse

Keep in mind you will have a human response to the event.

In 1995, I saw my first total solar eclipse on the border of Afghanistan and Iran. The eclipse was 15 seconds in total. I took pages of notes on what I'd do with two cameras during those 15 seconds—but the eclipse came, I looked up—and then it was over. I realized that during an eclipse, there's something very deep inside you that reacts to the darkness. I've seen people crying, people laughing. You'll need to be prepared for this human reaction to achieve a good result.

What are astronomical seasons?

People have always looked to the skies to determine the season.

Ancient Rome was the first to officially mark those seasons with the introduction of the Julian calendar. Back then, the seasons began on different days than the modern era because of discrepancies with the Gregorian calendar used primarily today. Now, the start of each astronomical season is marked by either an equinox or a solstice.

Where do most earthquakes occur?

Some 80 percent of all the planet's earthquakes occur along the rim of the Pacific Ocean, called the "ring of fire" because of the preponderance of volcanic activity there. Most earthquakes occur at fault zones, where tectonic plates collide or slide against each other. These impacts are usually gradual and unnoticeable on the surface; however, immense stress can build up between plates. When this stress is released quickly, it sends massive vibrations, called seismic waves, often hundreds of miles through the rock and up to the surface.

Your favorite foods may not taste the same in the future.

“When you depend completely on natural resources, as we do, you’re always thinking, looking, trying to predict how it is going to be. Because we depend on nature, we cannot grow it”. Globally, the people who produce our food are contending with weather that has been destabilized by climate change.

And all of it, is changing not only the quantity and quality of the foods we eat, but also the flavor itself.

Learning a new language

Scientists have long known that learning a new language is good for a child’s brain development. By rearranging and creating new connections in the brain, language learning can help kids focus more easily, resist distractions and perform better in school.

Learning a new language has benefits for an adult’s brain, too—plus new research suggests that it’s not as difficult as experts previously thought for adults to pick up a new language.
